## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance:

#### **In regard to Claims 1 and 8:**

None of the prior art of record is seen to disclose or suggest the limitation of claims 1 and 8 that wherein the delay component comprises a passive tunable delay line comprising an electrical conductor supported by a dielectric material the delay component comprising plural signal phase take off points, the plural phase take off points having differing phase shifts relative to one another. For example, the closest reference found, Juan et al. (US 2003/0099321), teaches an input means for splitting, a first and second branch, a component for delaying in the first branch, and a tuning means for tuning the delay line but does not teach wherein the delay component comprises a passive tunable delay line comprising an electrical conductor supported by a dielectric material the delay component comprising plural signal phase take off points, the plural phase take off points having differing phase shifts relative to one another.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lorber et al. (US 3,768,046) teaches that a physical distance between points along an undulating conductive strip determines the amount of delay which the delay line apparatus provides. Thus by moving the points either closer together or farther apart, the delay time of the circuit is accordingly respectively decreased or increased (Column 6: lines 50-56).

Lorber (046) teaches that the delay time is adjusted by mechanically changing the distance between the points on the conductive strip (Column 7: lines 4-9), instead of using a signal to change the conductive strip as required by Claim 1.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOHN W. POOS whose telephone number is (571)270-5077. The examiner can normally be reached on M-F (alternating Fridays off), E.S.T.
